

Project reference: Clevedon Pier

This project was originally awarded to Centregreat Engineering during its first year of incorporation; Centregreat engineers were more than familiar with the pier having been involved in previous phases of refurbishment projects.

This latest stage of the refurbishment included the repair and strengthening of pier trestles and tie bars.

Simon Talbot-Ponsonby (Chairman of the Clevedon Pier & Heritage Trust) was very pleased with our performance and quoted the following:

“Over the last 15 years the team at Centregreat have done three major steelwork repair and painting contracts on Clevedon Pier. Each time they have done an excellent job in very challenging circumstances. Their approach has been practical and very professional, achieving the works within the budget available without compromising standards. It has been a pleasure to work with them and this last project is no exception.”

Client: Clevedon Pier & Heritage Trust

Project Manager/Consultant: Simon Talbot-Ponsonby
